

Polycertify fixes

1) When I view the website in 80% zoom size, the result is perfect for me. However, 100% zoom size (actual zoom size) has lost the spacing at the side. My question is: can I always be responsive such that, in which kind of resolution, I will have a certain percentage of spacing beside.

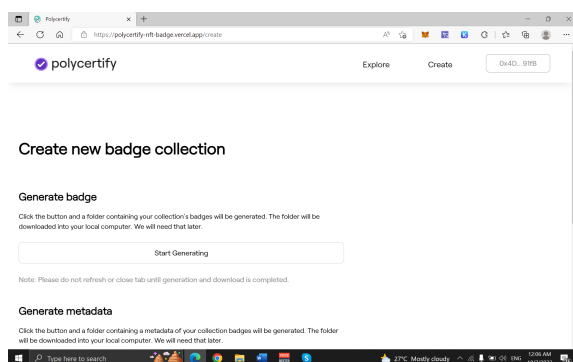

Here are some samples of my 80% zoom size (which is good) compare to 100% zoom size:

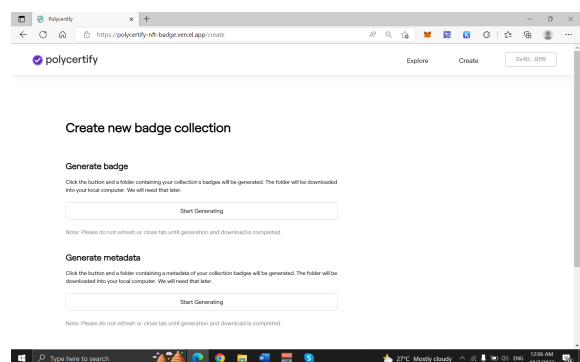

100% zoom size

80% zoom size

100% zoom size

80% zoom size

2) I love to have a huge spacing (margin) between the last element and the footer itself (not feeling packed and sticking to the bottom). These fixes apply to all UIs which has this problem. Here is an example:

3) When on explore page, the bottom purple line will be displayed at the bottom of the word “explore”. This also applies to “create”. The design can refer to the Figma file.

Explore

Create

4) In The first step of the badge creation form, the category choice is a single choice option, not a multiple choice. As the choice made by the user here will determine which form will be displayed in step 2 (you can refer to the details in the dev docs).

Categories

What category best describe your badge collection?

event participations  Select the Categories 

Plus, the placeholder should be “Choose a category”

5) The content box of the “details” section should be narrower and leaving more space at the side.
